QUBIK COLLECTION

Qubik is a device characterized by the highest level of KNX touch control technology. The innovation of Qubik is represented by the ingenious option to activate the functions of the device either immediately at the touch, or in delayed mode, making it inactive at the touch and sensitive to the sliding action to the right. The keys can be configured with ETS. All the methods foreseen by the KNX protocol are supported: switches, shutters and blinds, dimmers, scenarios, etc. The device is on white or black base, equipped with 8 capacitive buttons, even in the square version, and 4 RGB LEDs that can light up with 7 different colours: red, green, blue, yellow, turquoise, magenta and white. Qubik is equipped with a sensor for temperature measurement which can be programmed and integrated in the system, for the remote climate control in the different environments where the keyboard is installed. Furthermore, it offers the great opportunity to choose and combine two exclusive designs, that are customizable and interchangeable in the front plate. This allows you to change the design and colors at any time without having to replace the entire device.

Qubik is equipped
with an extremely
accurate digital
temperature sensor

qubik glass
when the light
meets the style

**Qubik is the new capacitive keyboard by Blumotix,
with modern design and innovative performances.**

Qubik Glass offers the magical glass transparencies, the material that fits the most current trends for interior environments, both classical and modern. Available as standard in black or white glass with the buttons in silver or gold. It combines a high level of technological development with the elegance of the Italian design and, on request, it is possible to customize the glass and the buttons in different colours.

Qubik is made to easily meet the tactile functionality of the controls in aluminium or steel, always preserving the quality of an extremely modern Italian design. The controls are available in the standard colours silver, chrome or gold. The most representative feature of this model is that the controls are easily handling without visual aid, to be really user friendly even in the dark.
