

## The smart lock for Hotel, B&B and Tourist Accommodation

The new access system to enter tourist accommodations for a safer and remote management and with a substantial reduction of management costs

- easy:** you can simply activate the door lock with a code
- quick:** the code can be sent via SMS to the guest
- safe:** guest will only type the code on the keyboard
- smart:** system installation and use are easy and intuitive

### What is DOORY?

Doory is the new access control system that allows to enter the accommodation facilities and rooms with your Smartphone.

Thanks to this technology, a hotel can:

-safely manage access to all the entrances of the accommodation facility, even determining, with the codes, a possible areas compartmentalization and therefore the possible alternative fruition for the clients and the employees (the opportunity to limit the access between the public area and the private one).

-apply the access control system with the code to the entrances of the accommodation facility (rooms, suites and apartments). The code can be sent to the clients even via SMS. All this greatly facilitates customer service, allowing to not be present upon arrival of the clients, a particularly useful solution during evening or night.

The numerical access system can completely replace the use of the keys or the electronic cards and ensure greater security, because it can be remotely activated or dis-activated via Smartphone, simply by downloading the APP DOORY, as well as programmable for the single period of the stay of the guest.

In fact, the **access code** can be renewed or updated for every new arrival.

Doory is an elegant 12-key capacitive touch glass solution, with backlighting activated thanks to the integrated proximity sensor. The memory can contain up to 100 data to allow the devices located in the common areas to be able to store the codes of every single room.

Each code has 6 digits to guarantee **maximum security**. The Doory keyboard is available in white (W) and black (B) and in the 503 horizontal (O) and vertical (V) formats.

The **BASIC KIT** for installation in a single unit contains a Power Supply, an Actuator, a Glass Push Button and a Miniserver to offer Internet programming services. App KRIM, the Blumotix application for your Smartphone, can be downloaded for free from iTunes and Google Play. The BASIC KIT can be extended to a MULTI-ROOM configuration by adding other smart keyboards up to a maximum of 4 (1 + 3 optional). By replacing the actuator with one or more devices having a greater number of channels, the system can be extended to the desired number of accesses.

As an alternative, the kit can be extended to a MULTI-FUNCTION configuration dedicated to a single living unit. In this case, the system can be completed by adding other automated functions such as temperature control and load control, controllable via Smartphone.

### Which needs does it meet?

Doory is born to ensure greater **security** to the accommodation facilities in the access control, both in the public areas and rooms, suites or apartments. Doory allows to simplify the reception and customer management services. It's useful to reduce **staff costs**. Furthermore, it should replace the concierge service at night, even allowing, thanks to the code combined with the single room, suite or apartment, to trace the presence of the clients at the hotel and detect eventual unauthorized access.

### In which kind of building can it be installed?

The system can be installed on accommodation facilities with 100 rooms, because it can manage up to 100 access codes simultaneously.
